

StradaTel TM EXTENDER

StradaTel TM
EXTENDER

Giving your customers more billing... for less.
FROM THE TM EXPERTS

Finally, a communications billing solution that fully integrates with OTM/TM 3.0 and delivers Advanced Features with no limits! This premium billing solution is typically 30% less than the cost of TM Billing.

Features:

Web Access - Allow web access to full report generation

Private Manager Web Accounts - Unique private web account where managers can view pre-run reports for their costs centers without having to enter any filters such as dates, etc.

Schedule Reporting - Reports are automatically produced and emailed to the various corresponding managers

Report on Cell & Pager Costs - Incorporate cell phone usage or fixed costs to be included in reporting

Multi-site Reporting - Easily report on multiple sites with one simple click

Incorporate Other PBX Types - Simply incorporate communication costs from other PBX types, such as Avaya, Cisco, Mitel & others

Limitless CDR Database Capacity - Designed to only be limited by the available hard disk space and CPU speed, you can run reports for previous years instantly

Fast Client Access - Seamless access to running reports from any client within the organization with speed and accuracy

StradaTel TM Extender gives you all the features you need without the limitations. Make sure you don't limit your customers!

StradaTel TM EXTENDER

StradaTel TM Extender

The StradaTel TM Extender is a separate application that fully integrates with TM's directory to ensure name changes within TM are reflected on reporting. This synchronization process would occur on a regular basis and the StradaTel TM Extender would be used to produce reports. This enables single point administration while leveraging the many benefits of the StradaTel TM Extender solution.

More Features:

- Implemented using the latest in implementation tools and a powerful, comprehensive, state-of-the-art report generation engine.
- Crisp modern user interface for easy and convenient navigation.
- System login feature that provides tiered access control to TM Extender data and features. A separate Administrator section provides access to system configuration and access control databases.
- Full range of detail and allocation reports.
- Report filters, which allow selection of ranges of data to be included in the reports.
- Support for recurring charges.
- The ability to generate custom reports (requires third-party Crystal Reports license).
- Web access supported by IIS, which is included in Windows 2000 Professional and above.

Hardware Prerequisites:

PC Compatible System with a minimum 512-megabytes ram and 2.5Ghz clock speed, 10-gigabytes of available disk space, 800 X 600 pixel monitor with a video card capable of supporting at least 256 colors, CD-ROM drive and a suitable pointing device (i.e. mouse). Additional main memory and disk space may be required depending on size of CCMS databases and the demands of other co-resident applications. Internet, LAN or serial communications port may be required depending on the data acquisition demands of the system. Note StradaTel TM Extender can reside on the TM Server or a separate machine.

Software Prerequisites:

Minimum of Windows 2000 Professional operating system or later. Accessing the web interface requires Internet Explorer 5.0 or later.
