

EMERGENCY  
911 NOTIFICATION

In an emergency situation time is never on your side. That's why Dyna Lync Telecom is offering *DynAlert*, a web and client based, real-time emergency reporting package that detects when 911 is called and immediately notifies you. Standard 911 reporting from call accounting software does not alert you until after calls have been terminated. DynAlert goes a step further and notifies you the second an emergency call has been initiated.

#### **Protection**

Protect your staff using equipment you already own. DynAlert turns your telephones into a powerful distress alarm. Not only are you alerted of staff in distress, but you can attach additional important information to employee telephones (health conditions, special medications, etc...) You can rest knowing your staff are protected in the event of an emergency.

#### **Notification**

Notify the people that need to know. DynAlert has been designed to alert as many people as you wish, as quickly as possible. You can configure DynAlert to notify you nearly any way you wish, whether it is by SMS text message, screen pop, email, and/or even sounding an alarm.

#### **Integration**

DynAlert fully integrates with the other StradaTel products to give you a complete, unified tele-management solution. When combined with the Stradatel Directory package, DynAlert requires very little setup work on your part. Information associated with each telephone is automatically imported and shared by DynAlert.

#### **Reliability**

Dyna Lync is fully committed to superior product quality, service and after-sale customer satisfaction. Our expert technicians are available to discuss your particular questions or concerns. When you buy DynAlert, the first year's updates and technical support are included.
